

Connecting you with everything you need for recovery

At Eureka Community Hospital, we know that during your recovery from orthopedic surgery, comfort, care, and convenience are vital to getting you back to your life and your independence.

That's why we've designed our Surgery Recovery Connection around total quality care—an advantage you'll only find in our hospital setting. When you recover with Surgery Recovery Connection, you have access to the full range of our services, all on the hospital campus and covered by Medicare. That helps streamline your care and means faster response for urgent care needs—no transfers to other facilities, no lengthy waits for laboratory or radiology results.

Surgery Recovery Connection—your link between hospital and home.

Physician Care

Our physicians make regular rounds at the hospital, so they are involved in your care on a day-to-day basis. Throughout your recovery, we work closely with your physician and surgeon to ensure you receive the best care possible.

24-Hour Nursing Care

A team of dedicated nurses provides care around the clock for all patients recovering from orthopedic surgery. Highly skilled and versatile, they're trained to care for patients with varied medical histories, including chronic conditions and special needs.

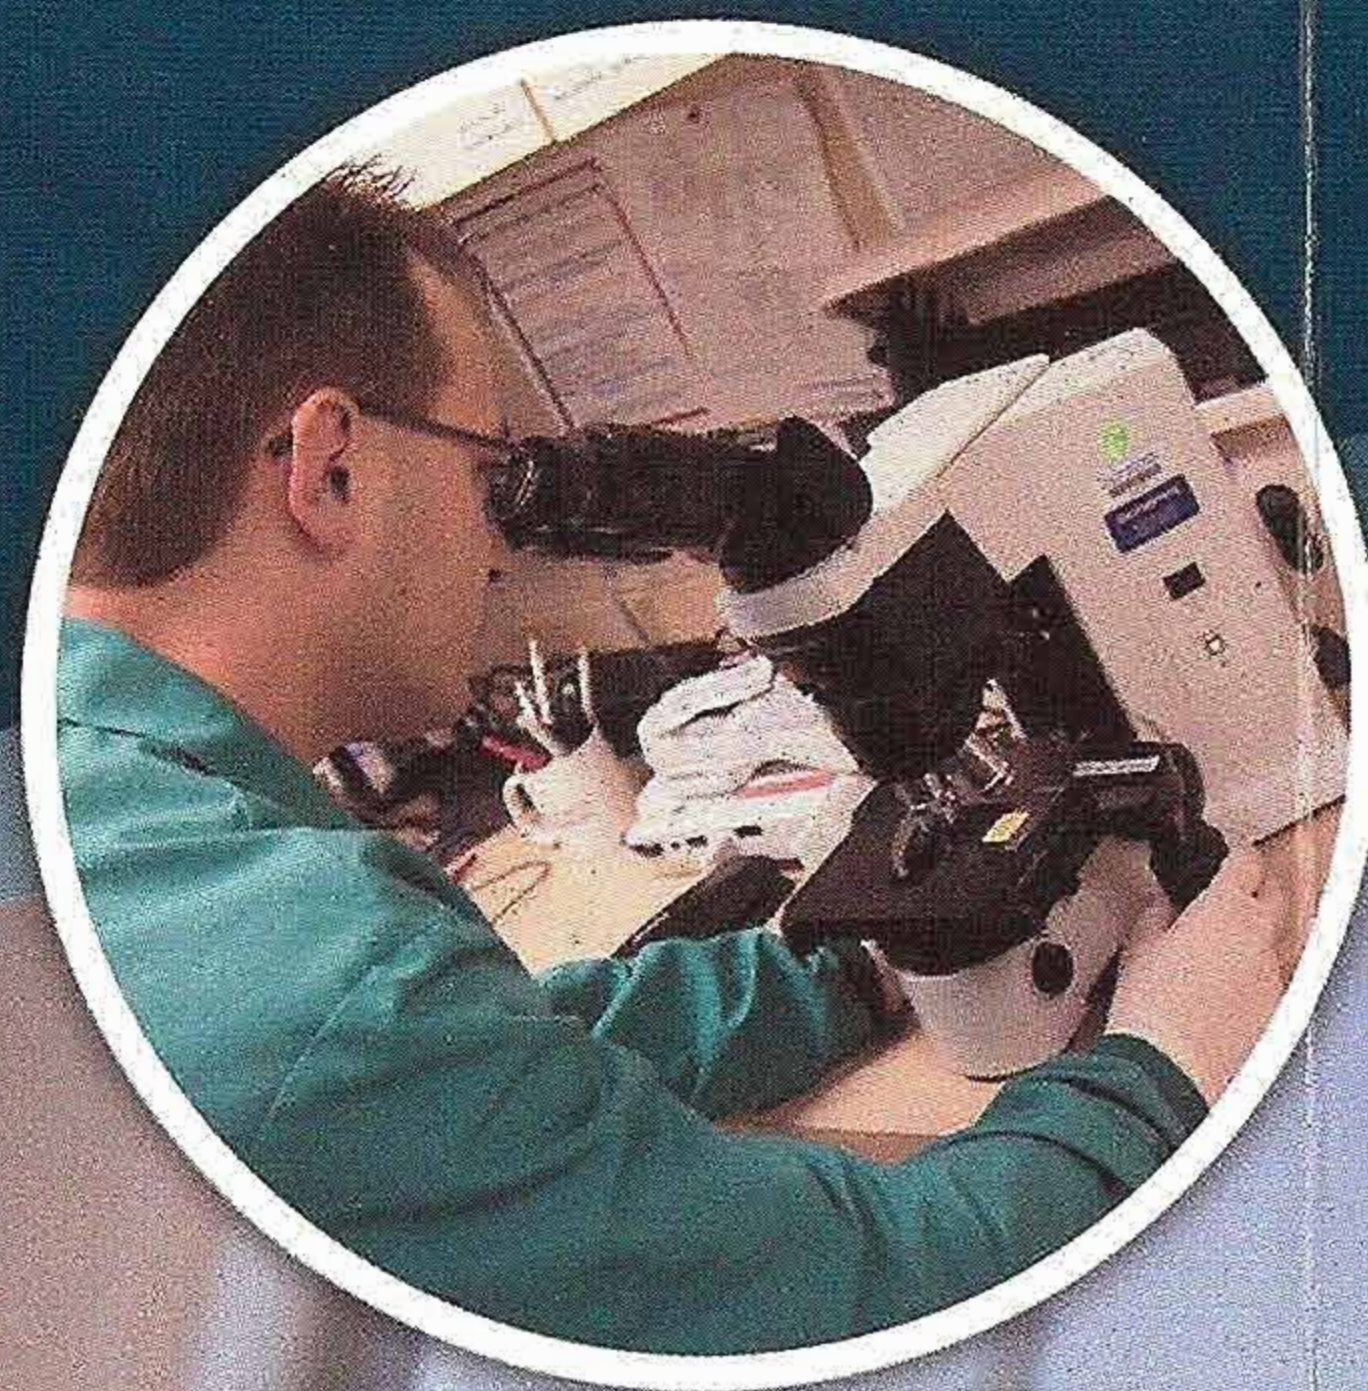

On-Site Therapy

Physical and occupational therapy is available seven days a week to help speed recovery and improve healing. Because therapy treatment is provided right on the Eureka Community Hospital campus, there is no need for time-consuming, often painful transfers to other facilities for therapy.

In-Hospital Lab and X-Ray

Recovery at Surgery Recovery Connection gives you access to all Eureka Community Hospital services—no waiting or transfers for lab work, diagnostic testing, x-rays, or other radiology services.

Electronic Medical Records

All charts are electronically stored on the computer, ensuring accurate and safe recordkeeping. Multiple medical professionals may access your records at the same time from the convenience of their office or home, any time day or night. In addition, your physicians, nurses, and therapists can access the latest test results, therapy progress notes, and physician orders faster and easier.
